### TEST REPORT No. 294030

**Place and date of issue:** Bellaria-Igea Marina - Italia, 27/04/2012

**Customer:** BTS ALUMİNYUM METAL ve PVC SAN. ve TIC.LTD.ŞTİ  
 Mermerçiler San. Şti. 7.Cad. No:6 - BEYLİKDÜZÜ / İSTANBUL - Türkiye

**Date testing requested:** 02/05/2012

**Order number and date:** 56214, 02/05/2012

**Date sample received:** 30/03/2012

**Date of testing:** 17/04/2012

**Purpose of test:** Resistance to horizontal static loading of a railing in accordance with standard NF P01-013:1988 and resistance to dynamic impact in accordance with standard NF P08-301:1991 and standard UNI 10807:1999

**Place of testing:** Istituto Giordano S.p.A. - Via Erbesa, 72 - 47043 Gatteo (FC) - Italia

**Origin of sample:** sampled and supplied by the Customer

**Identification of sample received:** No. 2012/0679

**Name of sample:**  
 The test sample is called "CS0 - HANDRAIL SYSTEM MADE OF GLASS AND ALUMINUM".

According to that stated by the Customer

This test report consists of 8 sheets Sheet 1 of 8

**DESCRIPTION**

**Material:** The test sample consists of aluminium and glass panels, connected with aluminium rails by stainless steel pins.

**Dimensions:**

- total height: 1000mm
- total width: 1000mm
- height of railing: 1000mm
- width of railing: 1000mm
- height of glass: 1000mm
- width of glass: 1000mm

**Reference:** NF P01-013:1988 and NF P08-301:1991

**DESCRIPTION**

**Material:** The test sample consists of aluminium and glass panels, connected with aluminium rails by stainless steel pins.

**Dimensions:** Same as above.

 DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING

Issue: B30.21TÜ.050.000.340-3 İstanbul, 18th October 2011

**REPORT**

This report is about the samples accompanying the letters dated 20th September 2011 of **ALTINDAĞ ALUMİNYUM METAL SANI ve TICARET A.Ş.**

**Sample:** Aluminium gunwale sample symbolized with A592-2, a glass with a mounting edge of 18 cm and a height of 100 cm being mounted thereon.

**Request:** Determination of the behaviour (resistance) of the gunwales mounted according to the method of application to load.

**Results:** As shown in the pictures, the test system applied load to the gunwale mounted on the test apparatus perpendicularly to the gunwale. The shift in the gunwale due to the load applied was recorded. The values of shift in the 100cm gap and corresponding to the loads applied are given in the table below. The test lasted until the glass was broken. The load values given in the table mean the total load applied in the 100cm gap and together with its own weight

The results obtained show that the resistance of the gunwale to the load applied is far above the resistance obtained in the study related to our report dated 30th June 2011.

Load Applied (kg)	Shift in Glass Gunwale End (mm)
18,65	10
26,35	15
34,05	20
41,75	30
49,45	40
57,15	50
64,85	60
72,55	70
80,25	80
87,95	90 (glass broken)
